UNIVERSITY OF SASKATCHEWAN

Department of Physics and Engineering Physics

Physics 117.3 <u>MIDTERM TEST – Alternative Sitting</u>

February 2016

Time: 90 minutes

NAME:

(Last)

Please Print

(Given)

STUDENT NO.: _____

LECTURE SECTION (please check):

01	Dr. Y. Yao
02	B. Zulkoskey
C16	Dr. A. Farahani

INSTRUCTIONS:

1. This is a closed book exam.

- 2. The test package includes a test paper (this document), a formula sheet, and an OMR sheet. The test paper consists of 8 pages, including this cover page. It is the responsibility of the student to check that the test paper is complete.
- 3. Only a basic scientific calculator (e.g. Texas Instruments TI-30X series, Hewlett-Packard HP 10s or 30S) may be used. Graphing or programmable calculators, or calculators with communication capability, are <u>not</u> allowed.
- 4. Enter your name and student number on the cover of the test paper and check the appropriate box for your lecture section. Also enter your student number in the top right-hand corner of each page of the test paper.
- 5. Enter your name and NSID on the OMR sheet.
- 6. The test paper, the formula sheet and the OMR sheet must all be submitted.

٦

7. The marked test paper will be returned. The formula sheet and the OMR sheet will <u>NOT</u> be returned.

ONLY THE <u>THREE</u> PART B QUESTIONS THAT <u>YOU INDICATE</u> WILL BE MARKED PLEASE <u>INDICATE</u> WHICH <u>THREE</u> PART B QUESTIONS ARE TO BE MARKED

	Ļ		
QUESTION NUMBER	TO BE MARKED	MAXIMUM MARKS	MARKS OBTAINED
A1-15	Σ	15	
B1		10	
B2		10	
B3		10	
B4		10	
TOTAL		45	

Page 2

PART A

FOR EACH OF THE FOLLOWING QUESTIONS IN PART A, ENTER THE MOST APPROPRIATE RESPONSE ON THE OMR SHEET.

A1. A tensile force *F* stretches a wire of original length *L* by an amount ΔL . Consider another wire of the same composition and cross-sectional area, but of length 2*L*. If a force of 2*F* is applied to this wire of length 2*L*, then the amount that it stretches is:

(A) $\frac{1}{2}\Delta L$	(B) ΔL	(C) $2 \Delta L$	(D) $4 \Delta L$	(E) $8 \Delta L$
---------------------------	----------------	------------------	------------------	------------------

A2. Which one of the following is **<u>not</u>** a unit of pressure?

(A) Pascal (Pa)	(B) atmosphere (atm)	(C) cm of mercury (cm Hg)
(D) kg·m/s ²	(E) pounds per square inch (psi)	

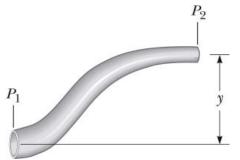

A3. How deep under the surface of a lake would the pressure be double the pressure at the surface? (1 atm = 1.01×10^5 Pa, density of water = 1.00×10^3 kg/m³)

(A) 1.00 m (B) 9.80 m (C) 10.3 m (D) 32.2 m (E) 43.6 m

A4. Assuming that water is an incompressible fluid, what happens as a rock, released when fullysubmerged just below the surface of the water in a swimming pool, sinks toward the bottom?

As the rock sinks,

- (A) the buoyant force on the rock increases and the average pressure on the rock increases.
- (B) the buoyant force on the rock increases and the average pressure on the rock decreases.
- (C) the buoyant force on the rock decreases and the average pressure on the rock decreases.
- (D) the buoyant force on the rock decreases and the average pressure on the rock increases.
- (E) the buoyant force on the rock remains constant and the average pressure on the rock increases.
- A5. Water moves through the pipe shown below in steady, ideal flow.

Which one of the following statements is correct concerning the pressure and flow speed in region 2 compared to region 1?

- (A) Both the pressure and flow speed are higher in region 2 than in region 1.
- (B) Both the pressure and flow speed are lower in region 2 than in region 1.
- (C) The pressure is lower in region 2 but the flow speed is higher than in region 1.
- (D) The pressure is higher in region 2 but the flow speed is lower than in region 1.
- (E) The pressure is lower in region 2 than in region 1 but the flow speed is the same.
- A6. A 3.0-cm-diameter pipe is replaced by one of the same length but of 6.0-cm-diameter. If the pressure difference between the ends of the new pipe remains the same as for the original pipe, by what factor is the volume flow rate of a viscous liquid through the new pipe greater than the volume flow rate through the original pipe?

A7. Three identical ideal springs each have the same spring constant *k*. If these three springs are connected end-to-end, forming a spring three times the length of one of the original springs, what is the effective spring constant of the combination?

(A) 9 k (B) 3 k (C) k (D) k/3 (E) k/9

continued on page 3...

- A8. Which one of the following statements is **FALSE** regarding a horizontal mass-spring system that moves with simple harmonic motion in the absence of friction?
 - (A) The total energy of the system remains constant.
 - (B) The potential energy stored in the system is greatest when the mass passes through the equilibrium position.
 - (C) The energy of the system is continually transformed between kinetic and potential energy.
 - (D) The total energy of the system is proportional to the square of the amplitude of the motion.
 - (E) The speed of the oscillating mass has its maximum value when the mass passes through the equilibrium position.
- A9. Simple pendulum 1, of length L_1 , has a bob of mass m_1 . Simple pendulum 2, of length L_2 , has a bob of mass m_2 . $L_2 = 3L_1$ and $m_2 = 3m_1$. Which one of the following statements concerning the periods, T_1 and T_2 , of the pendula is correct?

(A)
$$T_2 = \frac{1}{\sqrt{3}}T_1$$
 (B) $T_2 = \frac{1}{3}T_1$ (C) $T_2 = T_1$ (D) $T_2 = \sqrt{3}T_1$ (E) $T_2 = 3T_1$

- A10. What is the increase in the decibel level at a particular location when the power output from a sound source emitting a single frequency is doubled?
 - (A) 3.0 dB (B) 10.0 dB (C) 20.0 dB (D) 40.0 dB (E) 200 dB
- A11. A wave is travelling with a speed of v along a string in which the tension is *T*. If the tension is suddenly doubled, what is the new wave speed?

(A)
$$\frac{1}{4} \upsilon$$
 (B) $\frac{1}{2} \upsilon$ (C) $\frac{\upsilon}{\sqrt{2}}$ (D) $\sqrt{2} \upsilon$ (E) 4υ

A12. The distance between consecutive crests of a water wave is 2.0 m. As the wave passes a duck floating on the water, you notice that the interval between times when the duck is at maximum upward displacement is 2.0 s. The speed of the water wave is

(A) 0.25 m/s (B) 0.50 m/s (C) 1.0 m/s (D) 2.0 m/s (E) 4.0 m/s

- A13. If you double the tension in a guitar string, the fundamental frequency of vibration of the string...
 - (A) increases by a factor of $\sqrt{2}$. (B) becomes half as large. (C) doubles.
 - (D) increases by a factor of 4. (E) does not change.
- A14. Given that the strings of a guitar are the same length, is it possible for the strings to have the same tension but have different fundamental frequencies of vibration?
 - (A) Yes, and the lower the desired fundamental frequency, the smaller the required linear mass density of the string.
 - (B) Yes, and the lower the desired fundamental frequency, the larger the required linear mass density of the string.
 - (C) No, this is not possible because all strings at the same tension must have the same fundamental frequency.
 - (D) Yes, and the higher the desired fundamental frequency, the larger the required linear mass density of the string.
 - (E) No, this is not possible because all strings of the same length must have the same fundamental frequency.
- A15. A truck is being driven at a speed of 130 km/h due East. Two police cars, both moving with a speed of 150 km/h, and both with sirens emitting sound of the same frequency, f, are approaching the truck. Car 1 is approaching the truck from behind and car 2 is approaching the truck from ahead. Which one of the following statements is correct?
 - (A) The driver of the truck hears the same frequency f from each of the police sirens.
 - (B) The driver of the truck hears the same frequency $f_o > f$ from each of the police sirens.
 - (C) The driver of the truck hears the same frequency $f_o < f$ from each of the police sirens.
 - (D) The driver of the truck hears a higher frequency from the siren of the police car behind than he does from the siren of the police car ahead.
 - (E) The driver of the truck hears a higher frequency from the siren of the police car ahead than he does from the siren of the police car behind.

PART B

Answer <u>three</u> of the Part B questions on the following pages and indicate your choices on the cover page.

FOR EACH OF YOUR CHOSEN PART B QUESTIONS ON THE FOLLOWING PAGES, GIVE THE COMPLETE SOLUTION AND ENTER THE FINAL ANSWER IN THE BOX PROVIDED.

THE ANSWERS MUST CONTAIN THREE SIGNIFICANT FIGURES AND THE UNITS MUST BE GIVEN.

SHOW AND EXPLAIN YOUR WORK - NO CREDIT WILL BE GIVEN FOR ANSWERS ONLY.

EQUATIONS NOT PROVIDED ON THE FORMULAE SHEET MUST BE DERIVED.

USE THE BACK OF THE PREVIOUS PAGE FOR YOUR ROUGH WORK.

- B1. When a crown of mass 14.5 kg is suspended from an accurate spring scale and fully-submerged in water, the spring scale reads only 129.0 N.
 - (a) Calculate the buoyant force on the crown when it is fully-submerged in water. (3 marks)

(b) Calculate the volume of the crown. If you did not obtain an answer for (a), use a value of 12.5 N. (4 marks)

(c) Calculate the density of the crown. If you did not obtain an answer for (b), use a value of $1.30 \times 10^{-3} \text{ m}^3$. (3 marks).

Page 6

B2. The position of a 0.300-kg object attached to a spring and undergoing simple harmonic motion (SHM) is described by

 $x = (0.250 \text{ m}) \cos(0.400\pi t)$

where *t* is in seconds.

(a) Determine the amplitude of the motion. (1 mark)

(b) Calculate the spring constant. (3 marks)

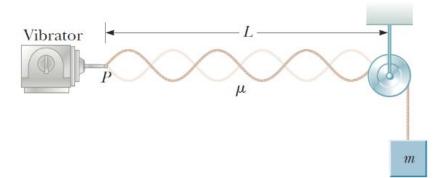

(c) Calculate the position of the object at time t = 0.300 s. (3 marks)

(d) Calculate the speed of the object at time t = 0.300 s. (3 marks)

- B3. A bomb explodes in mid-air and generates a sound wave which radiates uniformly in all directions. At a distance of r = 10.0 m from the blast, the sound wave intensity level is measured to be $\beta = 135$ dB, relative to the threshold of hearing.
 - (a) Calculate the intensity of the sound wave at a distance of 1.00×10^2 m from the explosion. (4 marks)

(b) Calculate the intensity level at a distance of 2.00×10^2 meters from two of these explosions if the bombs explode simultaneously at the same location. (If you did not obtain answer for (a), use a value of 0.300 W/m².) (6 marks)

B4. An object of mass *m* hangs from a cord around a light pulley. The length of the cord between point *P* and the pulley is L = 2.00 m. The mass of the cord between point *P* and the pulley is $m_c = 9.80$ grams. When the vibrator is set to a frequency of 151 Hz, a standing wave with six loops is formed.

(a) Calculate the speed of a wave on the cord. (3 marks)

(b) Calculate *m*, the mass of the object. If you did not obtain an answer for (a), use a value of 105 m/s. (4 marks)

(c) If *m* is changed to 10.0 kg, calculate the fundamental frequency of standing waves on the cord. (3 marks)
